

WebConnect®

WebConnect connects the LTC facility to the PrimeCare® Pharmacy Management System.

Provide a safe and secure connection between your pharmacy and local LTC facilities with QS/1®'s WebConnect. The electronic access can improve patient safety, as well as productivity and efficiency for both the pharmacy and LTC facility.

The easy-to-use browser-based software allows authorized LTC facility employees to access, search, edit, and print patient and medication information quickly and easily. This access also enables them to submit new orders and refills, view the patient billing matrix, and check on the status of deliveries. QS/1's iPad application provides complete access to WebConnect anywhere in your facility.

Facility users also have easy and immediate access to Help menus and 24/7 access to online tutorials and training materials.

Secure facility-level logons control access and protect electronic patient data, helping ensure patient information is shared only with authorized facility staff.

- Share data electronically between the pharmacy and facility.
- Improve customer service by providing access to facility-specific patient data from any workstation or an iPad.
- Enable facilities to electronically submit new or refill medication orders that flow directly into the pharmacy filling queue.
- Provide facilities ability to view their patient billing matrix whenever they wish.
- Generate destruction reports with pre-populated prescription information.
- Improve patient safety with electronic refill orders.
- Take advantage of wireless barcode scanning technology for safety and efficiency.

Facility Access

- Facility nurses can add, update, or view new patients
- Search patient active medication profiles
- Order new or refill medications
- View the patient billing matrix
- Print patient education monographs
- Check delivery status
- Receive deliveries
- Check for drug interactions
- View geriatric precautions
- Daily medication cost calculator
- View and print MARs

Facility Reporting

- Display and print refills submitted report
- Display and print report of daily facility deliveries
- Generate destruction reports with pre-populated information based on prescription data
- Active medication profile
- Discharge medication sheet
- Leave of absence sheet
- Medication reconciliation sheet
- Monthly MAR

Safe and Secure

- Control access with a secure facility-specific logon and pass code
- Patient information is only shared with authorized facility staff
- Utilize wireless barcode scanning technology for refill orders and delivery reconciliation
